Our difficulties starts here. Has wave 3 ended at the 200% projection or at 238.2% projection of wave 1?

Remember our goal is not to have accurate wave counts. It is to trade smartly.

If wave 3 has ended near the 200% projection, then wave 5, and hence wave C is already over. That would mean the first rally here is a new wave 1.

As explained in FWTF, wave 5 can end either at the 50% measure of 0-3, or at the 61.8% measure. The former is a retest of prior low and a double bottom if it ends there.

We are in wave iii
of wave 5

Once that ends and we get a
wave iv recovery, followed by
the final down move, you can
use the technique taught in
FWTFF to see where wave v
will end. If that coincides with
the targets shown earlier, you
have a very strong buy
indicated .

Any rally directly past the blue line
now should cause us to reconsider
whether we are already in wave 3
higher, reverting to the first option
discussed earlier.
